Carved with precision  
to dress up any space in  
the most effortless way

## An extraordinary touch to make everyday spaces unique

Level up your living space with KompacPlay Engraving – a surface customisation feature that uses advanced technology to enhance aesthetic appeal on KompacPlus kitchen backers, feature walls, custom furniture and more.

### **Complimentary\* with new KompacPlus Installations**

For a limited time only, each new KompacWall order is entitled to one (1) complimentary KompacPlay Engraving application that can be utilised on any KompacPanel surface of choice.

### **Let Every Groove be A Bold Display of Your Unique Character**

With a wide range of standard designs to choose from, shallow grooves are cut directly on KompacPanel surfaces to expose the inner core of the solid material as part of the aesthetic signature that can match the surrounding interior elements with ease.

### **Elevating Everyday Spaces with Supremely Durable KompacPanels**

Building on its solid and non-porous structure that features a material thickness of only 6mm, KompacPanel is an innovative surfacing material made in Italy that is tested and proven to be supremely resistant against stains, scratches and impact resulting from daily use.

\*Terms and conditions apply. See page 07 for more details.

## Recommendations

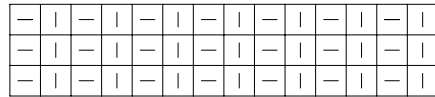

For best aesthetic appeal, KompacPlay Engraving is best recommended for vertical installations that utilise KompacPanels as kitchen wall backers, feature walls, cabinet doors and more.

As part of our efforts to offer quality workmanship and fuss-free aesthetics to enhance modern living experiences, every engraving groove is cut with a standard width and depth to allow easy maintenance over time. A simple wipe down using mild soap and water is all you need to remove dirt and spillage resulting from daily use.

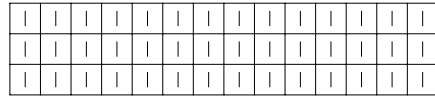

# Take your pick from the standard designs available for KompacPlay Engraving.

Kindly take note that KompacPlay Engraving applied on colours from the PLAINS, WOODS and PATTERNS Kollektion will expose the black core of KompacPanels as part of the aesthetic appeal.

As colours from the FENIX NTM range feature colour-matching cores underneath its signature ultra-matte surfaces, the application of KompacPlay Engraving will expose the core in the exact same colour as the FENIX panel surface instead.
